

Dear Mayor Brown, Aldermen, Dale Klussman and City Clerk.

As summer rapidly approaches, plans are being made to host the first annual Concordia Truck and Tractor Pull on August 26 at the City Lake. There are committee's working hard to make this the best pull in the surrounding community's. Therefore I want to propose to you some things that we may need your help with.

A large crowd is expected and of course we want to protect the city and also the general public from any accidents and to give police protection to the public also. Therefore I'm asking if the city can provide us police protection for the evening. Your help in this matter would be very helpful.

Want to thank the City and the Lake Board for allowing us and the city to put in better entrances to the pulling area. There will be many semi's and trailers entering the pulling area and of course there needs to be public parking available also and you have addressed that area too. Too comprehend as to how many people there will be it could be a thousand or better. Just don't know!

After visiting the area again today and talking to others about lighting and electricity I am proposing that we install a power pole near the existing poles that are on or near the track now. If you look at the map this would be Pole # 2. Running 250' of overhead wiring from Pole # 1. Installing a 35' pole would give proper clearance across the driveway. I would like to add a light on Pole # 1 too for pedestrian safety. Pole # 2 should include putting conduit with weather head at the top and installing some type of disconnect box. Conduit from pole # 2 could be buried to pole # 3. At present time the plan is to install our own lighting on poles # 3 and # 4. Presently there is conduit under the track that wire can be placed into to get electricity to the west lights. Plans are to remove the lighting after the pull is over. In the future more lighting will be added for the track by the organization and then removed. Since there is a large crowd expected food and drinks will be needed for the concessions stands. This is the reason the electricity is needed. In the past rental lighting was used from portable units and again it will be used up and down the tract this year. So to make it safe I'm proposing adding lights to Pole 1, Pole 5, Pole 7 and Pole 8 for pedestrian safety. Of course this would remain permanent lighting all year round. Local schools, organizations have been contacted to see if they were interested in running concessions for the event. There is some interest in having food trucks too. This area has a lot of potential for future activities and also adding some nice restrooms for events.

I'm asking the alderman to approve this proposal as it has a benefit to host other activities in the future. I'm also hoping that Evergy will approve it also. I'm asking the city submit the plan to Evergy for approval. If you have further questions please contact me.

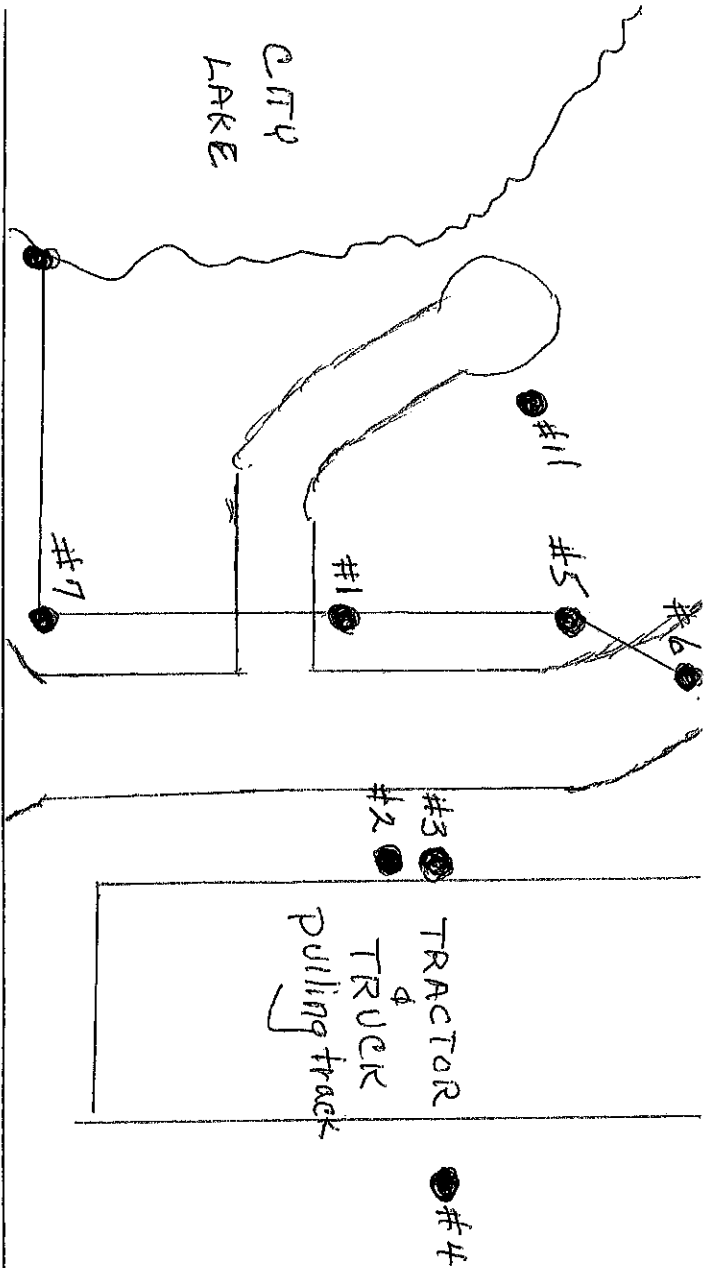

Yours truly,

Richard Cordes
